

C-LINES

Slaughterhouse

C-LINES offers you an answer to your slaughterhouse projects to meet your production and profitability needs.

These buildings offer the best possible performance in terms of control of working environment, security and optimization of the process.

An optimal design and adaptability ensures you all the assets of the best production units from the reception of animals, during the different phases of the process until the packing and loading of packaged products.

Turnkey solution

Buildings adapted to your projects.

C-LINES

Structure

Our structure is made up of thin bolted profiles offering buildings both lightness and high mechanical resistance. The production areas have no intermediate columns. We can guarantee ranges of 12m to 55m between posts and leave the field free to a layout of partitions as functional as possible. Besides, as the inside structure is invisible, it allows easy maintenance and a perfect bio security. All our structures are fully galvanized at 275 gr / m² minimum, thus offering a perfect resistance to all climatic conditions.

Claddings

Our walls and partitions are entirely made of insulated sandwich panels with polyurethane foam with thicknesses ranging from 40 to 100mm for this type of building. The latest-generation of coatings facilitates cleaning and meet stringent hygiene requirements. Providing sandwich panels will ensure a perfect thermal insulation and control of the energy cost of the building. We thus guarantee the zero thermal bridge objective and perfect airtightness.

Cold rooms and blast freezer: One of our specialties is the design and construction of cold rooms. We are experts in the implementation of positive cold rooms but also in negative cold rooms (down to -20 ° C) and forced air freezers (up to -40 ° C). These cold rooms have underfloor heating system, insulation, adequate ventilation, pressurization regulation and specific door frames; all for a perfect control of the temperature and the guarantee and the conservation of the goods.

Evolutions

C-Lines also offers a complete catalog of developments for your project to meet all the expectations of users and equipment manufacturers. We offer you functional and optimized buildings with high added value. These evolutions range from functional aesthetics to the realization of the set of works related to your project including masonry, plumbing, drainage, sanitary, ventilation, electricity for a building «turnkey». of C-Lines's strength is to support these complex projects by experienced project managers and thus to deal with equipment manufacturers.

Door frames and finishes

Benefiting from an extraordinary experience feedback in more than 60 countries, and with more than 100 constructions per year, C-lines has been able to adapt and offer high-end and shock-proof frames for trolleys with intensive and regular uses.

Life bases

C-lines can offer you living areas such as restaurants, sanitary areas including showers and changing rooms, rooms and dormitories. We also designed adapted administrative areas with offices and meeting rooms.
