

C-LINES

Hatchery

C-LINES offers you an adapted solution to your hatchery projects in order to give an optimal answer to your objectives of production and profitability.

These buildings offer the best possible performance in terms of control of the working environment, biosafety and process optimization.

An optimal design, and adaptability, ensures all the assets of the best production units to your buildings.

Turnkey solution

Buildings adapted to your projects.

C-LINES

Structure

Our structure is made up of thin bolted profiles offering buildings both lightness and high mechanical resistance. The production areas have no intermediate columns. We can guarantee ranges of 12m to 55m between posts and leave the field free to a layout of the parts as functional as possible.

Also, without any apparent structure inside, it allows easy maintenance and a perfect bio security. All our structures are fully galvanized at 275 gr / m² minimum, thus offering a perfect resistance to all climatic conditions.

Claddings

Our walls and partitions are entirely made of insulated sandwich panels with polyurethane foam with thicknesses ranging from 40 to 100mm for this type of building. The latest-generation of coatings facilitates cleaning and meet stringent hygiene requirements.

The use of sandwich panels will ensure a perfect thermal insulation and control of energy cost of the building. We thus guarantee a zero thermal bridge objective and perfect airtightness.

Evolutions

C-Lines also offers a complete catalog of developments for your project to meet all the expectations of users and equipment manufacturers. We offer you functional and optimized buildings with a high added value.

These evolutions range from functional aesthetics to the realization of the set of works related to your project including masonry, plumbing, drainage, sanitary, ventilation, electricity for a «turnkey» building.

C-Lines's strength is to support these complex projects by experienced project managers and thus to deal with equipment manufacturers.

Door frames and finishes

Benefiting from an extraordinary experience feedback in more than 60 countries, with more than 100 constructions per year, C-lines has been able to adapt and offer high-end and shock-proof frames for trolleys with intensive and regular uses.

C-lines a worldwide company
