

C-LINES

Layer

Benefiting from an extraordinary experience feedback from more than 60 countries, and with more than 200 constructions per year, C-Lines has been able to adapt and offer high quality poultry houses that are bio secured and resistant to any weather condition.

Designed in France, C-LINES offers different types of Layer houses to meet the highest requirements.

Turnkey solution

A premium range, diversified and constantly evolving.

C-LINES

A premium range

C-LINES offers different types of Layers houses to meet the highest requirements. These buildings are offering the best performance in terms of environmental control and biosecurity. Animal welfare is one of our priorities, thus maximizing the feed conversion rate and meat production. Our design will guarantee you a minimum energy consumption, and easy maintenance.

Production in cages or Free ranges: Two main ranges are offered across the globe to meet different cost and quality requirements.

GENERATION @: Having acquired experience in the construction of large industrial farms, C-Lines knows how to preserve high-end assets for high profitability requirements.

EVOLUTION @: Our catalog of options will offer products ranging from the so-called «functional» building to the «turnkey» building. These buildings will meet the requirements of Bio production or industrial requirements; we will also be able to offer either tunnel or transversal ventilation or to answer to any specific request.

Structures

It consists of thin galvanized steel sections, or heavy duties frames at 275gr / m² and fully bolted. The lightness of our structures allows us to offer unparalleled spans and therefore have no posts inside buildings.

A structure with durable performance and challenging all weather conditions !

Claddings an ceilings

The flat ceiling: promoted on all our projects, avoids the accumulation of heat at the top, reduces the volume of heating and also allows to accompany the air gap of a transverse dynamic ventilation.

A perfectly smooth inner wall allows easy cleaning and uninterrupted ventilation

Our galvanized and lacquered sheet metal or polyurethane foamed sandwich panel ceilings will ensure optimal biosecurity. Each junction is sealed with silicone and joined. The thicknesses of insulation can vary from a minimum of 4cm to meet the highest requirements. We guarantee the absence of thermal bridges and an optimal airtightness.

Benefiting from an extraordinary experience feedback from more than 60 countries, and with more than 200 constructions per year, C-lines has been able to adapt and offer high quality frames that are resistant to any weather condition.

C-lines a worldwide company
